EmpactX (MPX) White Paper

A Utility Token on Base · Version 2.0 · October 2026

Issued by Empactus AI LLC · Operated by EmpactX Inc., a Delaware corporation

Native on Base · 550,000,000 MPX Fixed Supply · Contract: 0xb0908b2FAC2A0786cedfe4769C9d74E254C1009e

1. Executive Summary

EmpactX (MPX) is a utility token deployed natively on the Base blockchain. MPX was issued by Empactus AI LLC (the "Issuer") and is operated by EmpactX Inc., a Delaware corporation (the "Operator"), which runs the EmpactX Bitcoin mining business and the wider EmpactX ecosystem. Proceeds from the public sale of MPX are directed toward scaling the Operator's Bitcoin mining operations, connecting the token's ecosystem to measurable hashrate production.

MPX is designed for practical utility: fast, low-fee transactions on Base; liquidity on Base decentralized exchanges; and participation in an ecosystem that includes mining infrastructure, an affiliate platform and an education institute. The MPX smart contract is immutable: ownership was renounced at launch, supply is fixed, and no party can mint additional tokens or alter the contract.

The project is directed by its Founder, Craig Shawn Williamson, as described in Section 8. MPX does not confer voting rights or governance authority on holders. This structure is disclosed openly so that holders, exchanges and counterparties understand it before participating.

2. Introduction to EmpactX

EmpactX is built on transparency, community strength and real Bitcoin mining operations. Its mission is to expand access to digital ownership by connecting on-chain participation with real-world Bitcoin mining infrastructure.

2.1 Issuer and Operator

Role	Entity	Responsibility
Issuer	Empactus AI LLC	Created and deployed the MPX smart contract on Base and issued the initial token supply

Role	Entity	Responsibility
Operator	EmpactX Inc., a Delaware corporation, 218 NW 24th Street, Miami, Florida 33127	Operates the EmpactX Bitcoin mining business, the EmpactX ecosystem, the official website and day-to-day MPX operations
Founder	Craig Shawn Williamson	Strategic direction of the project, as set out in Section 8

Official contact: support@empactx.com. Because the MPX contract is immutable, the Issuer has no on-chain control over it after renunciation; ongoing operational responsibility for MPX and the ecosystem rests with the Operator.

2.2 Vision

The vision of EmpactX is to become a trusted, accessible and sustainable gateway into digital asset ownership, with an ecosystem anchored by real Bitcoin mining production.

2.3 Milestones

- **Base Launch:** MPX deployed natively on Base on 28 July 2026 (token generation date) with a fixed supply of 550,000,000 MPX and active liquidity on a Base decentralized exchange.
- **Corporate Structure:** Empactus AI LLC established as the issuing entity; EmpactX Inc. established as the operating entity for the mining business and ecosystem.
- **Ecosystem Alignment:** MPX positioned as the utility token of the EmpactX ecosystem, supporting the growth of its Bitcoin mining operations.

2.4 The Role of MPX

MPX is the primary utility token of the EmpactX ecosystem on Base and remains freely tradable through Base DEX venues.

- **Utility Access:** MPX can be used to access ecosystem features and services offered by EmpactX Inc., Empactus AI LLC and affiliated products.
- **Mining Proceeds:** Proceeds from MPX issuance are directed toward scaling the Operator's Bitcoin mining operations.
- **Payments Utility:** Base's low fees make MPX practical for payments, tips, rewards and ecosystem transactions.
- **Standalone Utility:** MPX operates as a standalone Base-native token.

MPX is not equity in the Issuer, the Operator or the mining business, and does not entitle holders to mining revenue, profits or ownership of mining hardware.

2.5 Founder

EmpactX is led by Craig Shawn Williamson, Founder and CEO of Empactus AI LLC, U.S. Army veteran, published author and creator of The Tokenized Series.

Real estate background. Craig has worked across real estate development in four countries and twenty U.S. states, alongside brands including Four Seasons, Jack Nicklaus Companies, Hard Rock, Encore and Sterling Management, covering land acquisition, entitlements, capital structure, construction, sales and operations.

Crypto infrastructure. Craig built what he describes as the first mobile application for purchasing real estate with cryptocurrency, and created and operates a cryptocurrency exchange, a decentralized wallet system and a tokenization services company.

Empactus AI LLC. Empactus AI LLC is Craig's tokenization services company, with more than $2 billion in tokenization projects in its 2026 pipeline across family legacy structures, homes, yachts, operating businesses, charitable organizations, startups and real estate developments. It provides capital raise, community creation, token marketing and ongoing operations support.

El Castillo Resort. El Castillo Resort in Liberia, Guanacaste, Costa Rica is a boutique tokenized resort development built using the tokenization model described in The Tokenized Series.

The Tokenized Series. A library of fourteen published Expert Edition playbooks under the Empactus AI imprint, each covering the tokenization of a distinct asset class, from hotels and yachts to small businesses and mineral rights. The series is summed up by Craig's signature: "Anything of value should be tokenized."

Humanitarian work. Craig founded The Child Hunger Project, which funds school lunch programs internationally. Empactus AI directs a portion of company net revenue through the project to fund meal programs in Haiti, Jamaica and Venezuela.

3. Market Context and Opportunity

The cryptocurrency market has matured beyond pure speculation. Institutional adoption, real-world commerce integration and infrastructure-linked tokens are increasingly part of the landscape. EmpactX enters this environment as a Base-native utility token connected to a Bitcoin mining operation.

3.1 Base: The Right Chain for Utility

Base is one of the fastest-growing Layer-2 ecosystems by user activity, transaction volume and developer adoption. Its low fees, Coinbase integration, EVM compatibility and deep USDC liquidity make it a natural home for utility tokens designed for everyday use.

3.2 The Utility Gap

Many crypto projects are either purely speculative assets with no stated utility or complex financial products inaccessible to ordinary users. EmpactX takes a more straightforward position: a utility token with a clear use of proceeds (expanding Bitcoin mining operations) and a clear operating model (fast, low-fee transactions on Base).

3.3 Bitcoin Mining Operations

Bitcoin mining is a measurable activity: hashrate, uptime and production can be reported, and hardware and energy commitments are physical. EmpactX Inc. operates Bitcoin mining infrastructure built on liquid-cooled Antminer S21 XP Hydro units, each rated at 473 TH/s at approximately 12 J/TH. Proceeds directed to the mining division are used for hardware, energy infrastructure, operational capacity and geographic expansion.

Bitcoin price volatility, mining difficulty and hardware costs affect the economics of any mining operation. See Section 11.

4. The EmpactX (MPX) Solution

MPX brings utility and transparency to the Base ecosystem, with proceeds from public issuance directed toward the Operator's Bitcoin mining operations.

4.1 Core Design Principles

- **Base-Native Accessibility:** Low fees, deep liquidity and compatibility with the Base and Ethereum-compatible ecosystems.
- **Mining-Linked Utility:** Proceeds from issuance are directed toward scaling real Bitcoin mining operations.
- **On-Chain Transparency:** Treasury activity and distributions are recorded on-chain and publicly auditable.
- **Ecosystem Integration:** MPX integrates with the wider EmpactX and Empactus AI ecosystem while operating as a standalone Base-native asset.

4.2 Ecosystem Components

4.2.1 Token Layer

- **Fixed Supply:** MPX is an ERC-20 token on Base with a fixed maximum supply of 550,000,000.
- **EVM Standard:** The contract is written in Solidity and deployed on the Ethereum Virtual Machine via Base.

4.2.2 Smart Contract Architecture

- **Auditable Design:** The contract uses clean, minimal logic and standard OpenZeppelin base implementations, and is verified on BaseScan.
- **Immutable Contract:** Ownership was renounced at launch. No party, including the Founder, the Issuer and the Operator, can modify the contract, mint additional supply, pause transfers or upgrade it. Strategic and ecosystem direction (marketing, partnerships, treasury allocation) is provided off-chain; the token contract itself is permanently fixed.

4.2.3 Liquidity and Trading

- **DEX Liquidity:** MPX trades on Base decentralized exchange venues, currently via an MPX/USDC pool on Uniswap on Base. Additional pairs and venues may be added over time.
- **Discoverability:** MPX can be found by searching "MPX" or "EmpactX" in Base-integrated wallets and explorers.

4.2.4 Utility Access and Staking

- **Access Utility:** MPX is intended as an access token for EmpactX and Empactus AI ecosystem services, including analytics, tokenization tools and integrations with third-party DeFi applications on Base.
- **Staking and Rewards:** Staking and rewards features are planned for a later phase (see Section 9) and will be announced through official channels before launch.

4.2.5 Mining Proceeds

- Proceeds from the public issuance of MPX are directed toward scaling the Operator's Bitcoin mining operations: hardware, energy infrastructure, operational capacity and geographic expansion.

4.3 Differentiators

- **Base-Native:** A fast, low-fee, high-adoption Layer-2 with Coinbase integration.
- **Real Operations:** Issuance proceeds fund an operating Bitcoin mining business whose hashrate and production can be reported.
- **Founder-Led Execution:** Clear, decisive direction, avoiding the coordination overhead of decentralized governance.
- **Ecosystem Alignment:** Alignment with the wider EmpactX and Empactus AI ecosystem and future products.

5. Base Deployment Architecture

MPX is deployed natively as an ERC-20 token on Base, a Coinbase-incubated Ethereum Layer-2 rollup that inherits Ethereum's security while providing lower fees and higher throughput.

5.1 Why Base

- **Coinbase Integration:** Access to the Coinbase ecosystem of users and infrastructure.
- **Low Fees:** Practical for payments, tips, rewards and micro-transactions.
- **EVM Compatibility:** The same tooling, wallets and developer ecosystem as Ethereum.
- **Liquidity:** Strong liquidity on Base via leading DEX venues.
- **Speed:** Fast block times and quick finality.

5.2 Deployment Details

Attribute	EmpactX (MPX)
Chain	Base (Ethereum Layer-2), deployed 28 July 2026
Standard	ERC-20, 18 decimals
Contract	0xb0908b2FAC2A0786cedfe4769C9d74E254C1009e
Fixed Supply	550,000,000 MPX
Ticker	MPX
Issuer	Empactus AI LLC
Operator	EmpactX Inc. (Delaware corporation)
Primary Use Case	Utility token of the EmpactX ecosystem; proceeds support Bitcoin mining operations
Liquidity Pair	MPX/USDC (Uniswap on Base)
Discoverability	Coinbase-integrated wallets (search "MPX"), BaseScan, Uniswap

5.3 Immutability and Liquidity

Contract immutability was committed at launch to protect MPX holders. Liquidity provision is described below:

- **Renounced Contract Ownership:** After renunciation, no party, including the Founder, the Issuer, the Operator or any developer, can modify the contract, mint supply beyond the 550,000,000 cap, pause transfers, blacklist wallets or upgrade the contract. This is permanent and publicly verifiable on BaseScan.
- **Liquidity Pool Tokens:** Initial DEX liquidity is provided from project wallets, and the resulting LP tokens are held in project-controlled wallets. They are not currently locked. The Operator intends to place project-held LP tokens with a third-party liquidity locker and will publish the locker link, the lock end date and the share of LP tokens locked once this is done.

The renounced contract is intended to establish EmpactX as a project built for long-term trust. It is a deliberate operational trade-off made in favor of holder protection.

5.4 On-Chain Transparency

Every mint, transfer and treasury movement of MPX is publicly verifiable on BaseScan.

- **Fixed Supply Cap:** Total MPX supply is permanently capped at 550,000,000.
- **Verified Contract:** The contract is verified on BaseScan, allowing independent code review.
- **Auditable Flow:** Transfers, burns and treasury swaps are publicly auditable.

5.5 User Experience

- **Wallet Setup:** Add the Base network to any EVM-compatible wallet (MetaMask, Coinbase Wallet, Rabby, Rainbow) and import the MPX contract address. Always verify the contract address against the official website before transacting.
- **Trading:** Buy or trade MPX through Base DEX venues using USDC.
- **Single-Chain Deployment:** All MPX is deployed on Base. Any version of MPX on another network that is not announced through official EmpactX channels is not an official MPX token and is not issued or supported by the Issuer or the Operator.

5.6 Strategic Advantages of Single-Chain Focus

- **Focus:** Liquidity is concentrated on one fast-growing chain rather than fragmented across several.
- **Security:** A single deployment reduces the smart-contract attack surface and simplifies auditing.
- **Growth Alignment:** Base is one of the fastest-growing ecosystems in crypto by activity.

6. Technical Specifications

6.1 Token Standard

MPX is an ERC-20 token on Base, written in Solidity and natively compatible with standard EVM tooling. It supports the full ERC-20 interface for transfers, approvals and metadata queries.

6.2 Smart Contract Design

- **Auditability:** Clean, minimal logic built on standard OpenZeppelin implementations, with source code verified on BaseScan.
- **Renounced Ownership:** No further modification is possible by any party.
- **Fixed Supply:** Permanently capped at 550,000,000 with no minting authority.

6.3 Security

- **Base L2 Security:** MPX inherits the security of Base and its Ethereum settlement layer.
- **Third-Party Audit:** An independent security audit by a recognized third-party auditor is planned (see Section 9). No audit has been completed as of the date of this version.
- **Wallet Security:** Treasury and Founder-controlled wallets use industry-standard practices, including hardware wallet storage for privileged operations.

6.4 Transparency

Treasury activity and distributions are recorded on-chain and publicly auditable.

6.5 Interoperability

MPX is compatible with the Base and Ethereum wallet ecosystems, including MetaMask, Coinbase Wallet, Rabby and Rainbow, and can be integrated into third-party DeFi applications on Base such as DEX aggregators and portfolio trackers.

6.6 Nodes and Infrastructure

Light nodes suit end-user wallets and synchronize with Base full nodes. Full Base nodes are operated by Coinbase, Optimism and third-party infrastructure providers.

7. Token Economics

7.1 Total Supply

The maximum total supply of MPX is permanently capped at 550,000,000 tokens, all deployed on Base as ERC-20 tokens on 28 July 2026 (token generation date). No minting authority exists beyond the initial issuance.

7.2 Distribution

Category	Allocation	Purpose
Public Sale & Liquidity	40%	Fundraising, DEX liquidity provision and community growth. Proceeds support the Operator's Bitcoin mining operations.
Mining Reserve	25%	Held in treasury and deployed over time to fund Bitcoin mining expansion, hardware and energy infrastructure.
Ecosystem & Rewards	15%	Staking rewards, community incentives, ecosystem partnerships and integrations.
Founder & Operations	10%	Founder compensation (capped per Section 8), core operations, engineering and marketing.
Strategic Reserve	10%	Treasury reserve for future ecosystem needs, contingencies and strategic partnerships.
Total	**100%**	**550,000,000 MPX**

7.3 Circulating Supply and Wallet Disclosure

Circulating supply is total supply minus tokens held in the Mining Reserve, Strategic Reserve, Ecosystem & Rewards (until distributed), Founder & Operations, and any locked or vesting wallets. As of 17 October 2026, project wallets hold 430,571,059 MPX (78.3% of total supply), including Public Sale tokens not yet distributed, so circulating supply is 119,428,941 MPX. Wallet addresses are disclosed to data aggregators and listing platforms, and the Operator updates the circulating supply figure at least quarterly.

Label	MPX	% of supply
Mining Reserve	131,294,006	23.87%
Ecosystem & Rewards	110,610,449	20.11%

Label	MPX	% of supply
Founder & Operations	98,520,098	17.91%
Strategic Reserve	73,740,377	13.41%
Deployer treasury (residual)	16,406,129	2.98%
Total	**430,571,059**	**78.28%**

7.4 Utility

- **Ecosystem Alignment:** MPX connects holders to the EmpactX ecosystem, whose operations include Bitcoin mining. Protocol, policy and funding decisions are directed by the Founder.
- **Ecosystem Services:** MPX is intended to give access to features such as analytics, tokenization tools and third-party DeFi integrations on Base.
- **Trading:** MPX trades against USDC on Base.

7.5 Rewards

- **Liquidity Rewards:** MPX farms may reward users who provide liquidity on Base DEX venues.
- **Participation Bonuses:** Tokens may be awarded at the Founder's discretion for community engagement, ecosystem building and bug reporting.

7.6 Supply Discipline and Sustainability

MPX supply is permanently fixed, with no minting authority. Directing issuance proceeds toward an operating Bitcoin mining business is intended to support the ecosystem over the long term. It is not a guarantee of any price, return or revenue.

8. Founder Role and Responsibilities

Empactus AI LLC was formed, funded and launched by Craig Shawn Williamson (the "Founder"). This section sets out the Founder's rights, responsibilities, compensation and succession provisions with respect to MPX, so that holders, exchanges and counterparties understand the control structure before participating. The Founder's authority is exercised through the Issuer and, for operating matters, through the Operator.

8.1 Scope of Founder Authority

- **Operational Authority:** Sole authority over operations, management, scaling, budget allocation and treasury distribution of MPX. Treasury MPX held in Founder-controlled wallets remains movable for legitimate operational purposes under this section. The contract itself is immutable and no MPX beyond the fixed 550,000,000 supply can be minted.
- **Strategic Authority:** Sole authority over deployment strategy, ecosystem expansion and all off-chain strategic decisions. On-chain protocol modifications are not possible by any party.
- **Amendment Authority:** Sole authority to amend this white paper, subject to Section 8.4.
- **Counterparty Authority:** Sole authority to select, engage, retain and terminate service providers, contractors, engineering teams, marketing partners, exchanges and other counterparties.

8.2 Founder Compensation

Beginning in the third month after the initial public launch of MPX, the Founder is entitled to annual compensation of Five Hundred Thousand United States Dollars ($500,000 USD) for ongoing operational, strategic and management services.

- **Annual Cap:** Capped at $500,000 USD (equivalent) in any calendar year, inclusive of all swaps and distributions under this section.
- **Payment Method:** Paid by swapping MPX for USDC. Both treasury-held tokens and Founder-owned personal tokens may be swapped, at the Founder's discretion, in tranches and at times he determines, provided the annual cap is not exceeded.
- **On-Chain Transparency:** All compensation swaps are executed on-chain, and aggregate compensation activity may be published periodically.
- **Accrual:** If market conditions make payment impractical in a given year, unpaid compensation may accrue and be paid in later years, subject in each year to the cap.

8.3 Discretion Over Treasury and Personal Holdings

The Founder retains full authority to manage treasury and personal MPX holdings for the project, in accordance with Section 8.2. This includes directing treasury allocations toward mining operations, ecosystem development, liquidity, marketing, engineering and operations, and executing operational swaps of treasury tokens to fund project expenses. Operational swaps are separate from Founder compensation and are not subject to the $500,000 cap, but are conducted transparently and for the benefit of the project.

8.4 White Paper Amendment Authority

The Founder may amend this white paper at his sole discretion to reflect scaling, operational changes, distribution methodology, ecosystem expansion and off-chain policy. Amendments are published transparently, dated, and made available through official EmpactX channels. Material amendments affecting Founder compensation or off-chain policy are announced to the community in advance of taking effect. This authority covers the white paper only; the MPX smart contract cannot be amended by any party. Total MPX supply is permanently fixed at 550,000,000.

8.5 Succession Upon Death or Incapacity

If the Founder dies or becomes incapacitated, all MPX tokens, treasury authority, Founder rights and Founder privileges under this section pass in their entirety to the Founder's daughter, Hannah Maria Williamson Angulo, who then succeeds to all positions and authority of the Founder for the EmpactX project. On-chain succession of Founder-controlled wallets, treasury multisigs and private keys is effected through the Founder's estate planning documents, in coordination with Empactus AI LLC's Operating Agreement and related documents.

8.6 No Governance Rights for Holders

MPX confers no voting rights, governance authority or decision-making power of any kind on holders. All operational, strategic, technical, financial and policy decisions are made exclusively as set out in this section. Prospective holders should consider this centralized structure, together with the risks in Section 11, before participating.

9. Roadmap

Timelines are subject to change at the Founder's discretion based on market conditions, technical requirements and strategic priorities.

9.1 Phase 1: Launch and Establishment

- Deploy the MPX contract on Base with a fixed 550M supply.
- Establish DEX liquidity on Base with an MPX/USDC pool.
- Publish the official website, documentation and community channels.
- Begin allocating proceeds toward the Operator's Bitcoin mining expansion.

9.2 Phase 2: Ecosystem Growth

- Complete a third-party smart contract security audit and place project-held LP tokens with a third-party liquidity locker.

- Launch staking pools and rewards distribution features on Base.
- Publish a first mining expansion report showing the deployment of MPX proceeds.
- Integrate MPX into ecosystem services and EmpactX and Empactus AI product offerings.

9.3 Phase 3: Adoption and Integration

- Integrate MPX into third-party decentralized applications on Base.
- Expand merchant adoption for MPX payments through Base-native payment infrastructure.
- Publish quarterly transparency reports on treasury movements and mining growth.

9.4 Phase 4: Maturity and Scale

- Continue expanding Bitcoin mining infrastructure funded by MPX proceeds.
- Integrate with other Empactus AI-issued tokens and partner projects.
- Evolve the ecosystem in response to technology, market and regulatory changes.

10. Regulatory Compliance and Founder Control

MPX operates as a Founder-directed digital asset. Operational, strategic, financial and policy decisions are made as set out in Section 8, prioritizing decisive execution and long-term consistency over the coordination costs of decentralized governance.

10.1 Founder-Directed Framework

- **Transparency:** Treasury activity, token movements and material operational changes are recorded on-chain and publicly auditable.
- **No Voting Rights:** MPX confers no voting rights of any kind. Holders acquire the token for its ecosystem utility, not for governance participation.
- **Responsiveness:** Founder-led direction enables fast adaptation to technology and market changes.

10.2 Decision and Implementation Process

Ecosystem initiatives, treasury allocation, marketing and partnerships are directed by the Founder. Community members may submit feedback through official channels; final decisions rest with the Founder. No voting, quorum or approval-threshold process applies to MPX.

10.3 Legal and Regulatory Compliance

Empactus AI LLC and EmpactX Inc. are committed to complying with applicable laws and regulations in the jurisdictions where MPX is offered or made available, and work with legal counsel on securities law considerations, anti-money-laundering requirements and jurisdiction-specific restrictions.

10.4 Important Notice

This white paper is provided for information only. It is not an offer to sell or a solicitation to buy any security or financial product in any jurisdiction, and it does not constitute financial, legal or tax advice. MPX is a utility token and does not represent equity, debt or a claim on the revenues or assets of the Issuer, the Operator or the mining business. MPX is not available in jurisdictions where its offer or sale would be prohibited.

11. Risk Factors

Prospective holders should consider these risks, together with all other information in this white paper, before acquiring MPX. The list is not exhaustive.

11.1 Regulatory and Legal Risks

- **Evolving Regulation:** Crypto regulation continues to evolve globally. Future actions in the United States or elsewhere could affect MPX's legal status, its ability to trade on exchanges or its accessibility to certain holders.
- **Securities Classification:** Depending on regulatory interpretation, MPX or elements of the EmpactX offering could be deemed a security in one or more jurisdictions, which could require compliance actions with material impact.

11.2 Market and Price Risks

- **Price Volatility:** MPX is subject to significant volatility and may decline substantially from any purchase price. Holders can lose the entire value of a position.
- **Liquidity Risk:** Liquidity depends on trading activity and ecosystem participation.
- **LP Token Custody:** LP tokens for the MPX/USDC pool are held in project-controlled wallets and are not currently locked, so liquidity could be reduced or removed by their holders. A lock is planned (see Section 9) but is not guaranteed to cover all LP tokens.

11.3 Technical and Security Risks

- **Smart Contract Risk:** Smart contracts are subject to bugs and exploits. Even audited contracts have been compromised, and the MPX contract has not yet been audited by a third party.

- **Base Network Risk:** MPX depends on the security and continued operation of Base and its Ethereum settlement layer.
- **Permanent Immutability Risk:** Because ownership is renounced, a bug or vulnerability discovered after launch cannot be patched or corrected by any party.

11.4 Founder Control and Key-Person Risks

- **Centralized Control Risk:** Holders have no voting rights or ability to override Founder decisions. This concentration of authority creates risks including decisions holders disagree with, dependence on the Founder, potential conflicts of interest, and changes in direction that could affect the value of MPX.
- **Key-Person Risk:** The ecosystem depends materially on the Founder's continued involvement. Section 8.5 provides for succession, but transitions carry execution risk.
- **Treasury Sales:** Founder compensation and operational swaps of MPX for USDC (Section 8) may add selling pressure on the market.

11.5 Issuer, Operator and Mining Risks

- **Entity Structure Risk:** MPX was issued by one entity and is operated by another. Changes to, or disputes in, the relationship between the Issuer, the Operator and the Founder could affect the project.
- **Dependence on Mining Operations:** The ecosystem partly depends on the operational capacity, hardware deployment and energy infrastructure of the Operator's mining business and its partners.
- **Bitcoin Market Risk:** Bitcoin price volatility, mining difficulty changes, energy costs and hardware costs may adversely affect the mining business. MPX holders have no claim on mining revenue or hardware.

12. Conclusion

EmpactX (MPX) is a purpose-built utility token for the Base ecosystem. Issued by Empactus AI LLC and operated by EmpactX Inc., it combines a fixed 550,000,000 supply and an immutable contract with an operating Bitcoin mining business that receives proceeds from public issuance. The project pairs Founder-directed execution with on-chain auditability, and discloses its structure and risks openly.

Document History

Version 2.0, October 2026. Updated to identify Empactus AI LLC as the Issuer and EmpactX Inc. as the Operator. Clarified wording on use of proceeds, staking status, audit status, liquidity venues and cross-chain availability, and added circulating supply disclosure with a project wallet table, an important notice and entity-structure risk factors. Removed the statement that liquidity pool tokens were locked at launch and described their current custody.

EmpactX (MPX) · Issued by Empactus AI LLC · Operated by EmpactX Inc. · Native on Base
