EmpactX Inc. Unveils a Fully On-Chain Operating Model Uniting Bitcoin Mining Ownership, Blockchain-Settled Affiliate Infrastructure and a Transparent Token

EmpactX Inc. pairs non-recourse miner ownership, an affiliate platform that settles every commission on a public ledger, and a renounced and non-mintable token under one "Blockchain Life" platform

MIAMI, Fla. — October 21, 2026 — EmpactX Inc., headquartered in Miami, today outlined the operating model behind its "Blockchain Life" platform: three connected businesses — EmpactX Mining, the MPX token and the EmpactX Global affiliate platform — built so that ownership, settlement and disclosure take place in the open, where anyone can verify them.

Rather than building a token around a launch, EmpactX built the company around the token. The firm spent an incubation period standing up operating businesses with customers and measurable output: a mining operation with machines in a commercial facility, an equipment program with signed terms and named owners, and an affiliate platform that settles on-chain. There was no penny launch, no influencer campaign and no countdown clock.

Affiliate Distribution, Settled Entirely On-Chain

EmpactX Global is affiliate distribution infrastructure built natively on blockchain settlement rather than retrofitted onto it. The platform conducts its business without banks or credit card processors, eliminating chargeback windows and multi-day wire delays. Commissions are calculated on qualifying product sales, settled daily following administrative review, and recorded on a public ledger that anyone can audit. EmpactX knows of no other affiliate program in the world built this way. In a design choice that reflects the company's philanthropic roots, the fifth level of the commission structure is directed in full to The Child Hunger Project.

The same infrastructure is now available to outside token sponsors through EmpactX Whitelabel licensing. Program Operators launch a fully branded affiliate program under their own name and their own existing token, configure their own compensation structure and settlement cadence, and retain full custody of their funds — EmpactX never custodies licensee or participant funds or tokens at any point. Licensing is offered in Starter, Growth and Scale tiers at $499, $699 and $999 per month, hosted by EmpactX by default, with self-hosted deployment available at the Scale tier.

Bitcoin Miner Ownership, Financed by the Machine's Own Production

EmpactX Mining, a division of EmpactX Inc., describes its program as the first non-recourse financing program for individually owned Bitcoin miners. Purchasers take title to a specific machine, identified by serial number, on the day of their down payment — not a lease, not a share of a pool and not a hashrate contract. The financed balance is repaid solely from the machine's own mining yield, with no monthly payment, no term, no credit check and no personal liability.

The program's featured unit, the liquid-cooled Antminer S21 XP Hydro, is rated at 473 TH/s and 12 J/TH and is offered at a purchase price of $3,750 with a flat $1,000 down payment. Units are installed at the Value Hash data center in Nebraska and operated, monitored and maintained by EmpactX Mining. While a

balance remains, 25% of gross yield is credited to the purchaser from the first day of production; once the balance clears, the withholding ends permanently. Each owner receives a full statement on the 10th of every month showing every day the machine ran and what it produced.

A Token Built for Verification

MPX, issued by Empactus AI LLC and operated by EmpactX Inc., trades on the Base network against USDC. Its design is intended to remove the questions careful buyers ask first: total supply is fixed at 550,000,000 tokens, contract ownership has been renounced, the token is not mintable, and the contract address, supply, tokenomics, liquidity and risk disclosures are published in full on the company's website. MPX is tradable in the Coinbase app and on major decentralized exchanges.

The EmpactX Earning Pool, a public MPX/USDC Uniswap v2 pool on Base, lets holders put tokens to work without surrendering control. Tokens move from the holder's own wallet into the public pool, positions remain tied to that wallet, there are no lockups, and liquidity providers share the pool's 0.3% trading fee in proportion to their share. EmpactX does not custody, control or operate the pool.

Leadership Perspective

"We built the company around the token, not the token around a launch," said Craig Shawn Williamson, Founder and Chief Executive Officer of EmpactX Inc. "Every part of EmpactX — the machines, the settlement layer and the contract — is designed so a person can verify it for themselves rather than take our word for it. The people we serve read contracts and pool depth before they act. We would rather lose a sale to a disclosure than win one without it. That is what Blockchain Life means to us."

About EmpactX Inc.

EmpactX Inc., headquartered in Miami, Florida, operates at the point where digital assets become infrastructure. Through EmpactX Mining, the company builds and operates Bitcoin mining capacity and places machines under the outright ownership of the people who buy them. MPX, its token on the Base network, powers EmpactX Global, an affiliate platform that conducts its business on-chain and is licensed to outside token sponsors through EmpactX Whitelabel. The EmpactX Institute, the company's digital-asset education platform, is currently under development. Learn more at www.empactx.com.

About Craig Shawn Williamson

Craig Shawn Williamson is the Founder and Chief Executive Officer of EmpactX Inc. and Empactus AI LLC. A decorated U.S. Army veteran of intelligence and operations, he brings a background in real estate development across multiple countries and U.S. states. He is the author of The Tokenized Series and founder of The Child Hunger Project, which has provided more than 500,000 meals to children in need over roughly a decade.

Important Disclosures

This press release is for informational purposes only and is not an offer to sell, or a solicitation of an offer to buy, any security in any jurisdiction. MPX is currently a utility token. Digital assets are volatile, are not insured by the FDIC, SIPC or any government agency, and you can lose the entire value of a position. EmpactX Mining equipment sales are sales of equipment, not securities or managed funds; mining output depends on network difficulty, pool performance, hosting and power costs, uptime and the market price of Bitcoin, none of which EmpactX Inc. controls, and EmpactX makes no representation as to the amount of Bitcoin any machine will produce or the time required to repay a financed balance. Participation in the EmpactX Global representative program is a business opportunity, not employment or an investment, and EmpactX makes no representation or guarantee of earnings. This release may contain forward-looking statements that are subject to risks and uncertainties; actual results may differ materially.
