EmpactX Introduces Miner Ownership Financing Program, Opening Bitcoin Mining to Buyers with $1,000 Down per Miner

Purchasers take title on the down payment, the machine's own production repays the balance, and no further payments are required from the owner

MIAMI, Fla. — October 22, 2026 — EmpactX Inc. today introduced the EmpactX Miner Ownership Financing Program, a new way to own a Bitcoin mining machine with a down payment of $1,000 per miner. Under the program, the balance on each machine is repaid from that machine's own mining production, while the owner receives a share of the Bitcoin it produces. No further payments are required from the owner unless they choose to pay off their miner early.

Removing the Two Biggest Barriers to Mining

For many people, Bitcoin mining has been out of reach for two reasons: the high upfront cost of current-generation equipment, and the hosting, power and technical demands of keeping a machine running. The Miner Ownership Financing Program is designed to address both. A single down payment replaces the full purchase price, and EmpactX Mining installs each machine at a professional data center partner, where it is powered, cooled, monitored and maintained on the owner's behalf.

How the Program Works

Title to the machine transfers to the purchaser on the day of the down payment, identified by serial number. The purchaser owns a specific machine, not a lease, a hashrate contract or a share of a pool. While a balance remains, a portion of the machine's mining production is applied to that balance, and the owner receives a share of the Bitcoin produced from the first day of production. Once the balance is repaid, the owner's share of production increases for the life of the machine.

There is no monthly payment, no term, no payment schedule and no credit check. Financing is non-recourse: the balance is repaid solely from the machine's production, and the owner has no personal liability for it. Owners who prefer to clear their balance sooner may pay off their miner early at any time, with no prepayment penalty. Each owner receives a full monthly statement showing every day the machine ran and what it produced.

Evaluating Zcash Mining

EmpactX is also evaluating adding Zcash miners to the program. Zcash is mined on dedicated Equihash hardware, and the high cost of that equipment has been a significant barrier for individual buyers. Extending the financing model to Zcash would apply the same structure to another proof-of-work network where upfront equipment cost is the primary obstacle to ownership.

Leadership Perspective

"Most people who are interested in mining never get past the price tag or the question of where the machine would even run," said Craig Shawn Williamson, Chief Executive Officer of EmpactX Inc. "This program puts a real machine, with a serial number, in the owner's name from day one, and handles everything it takes to keep it running. The machine works off its own balance, and owners who want to

move faster can pay it off whenever they choose."

About EmpactX Inc.

EmpactX Inc., headquartered in Miami, Florida, operates at the point where digital assets become infrastructure. Through EmpactX Mining, the company builds and operates Bitcoin mining capacity and places machines under the outright ownership of the people who buy them. MPX, its token on the Base network, powers EmpactX Global, an affiliate platform that conducts its business on-chain. Learn more at www.empactx.com.

Important Disclosures

The EmpactX Miner Ownership Financing Program is a sale of mining equipment. It is not a security, an investment contract or a managed fund, and this press release is not an offer to sell, or a solicitation of an offer to buy, any security. Mining output depends on network difficulty, pool performance, hosting and power costs, equipment uptime and the market price of Bitcoin, none of which EmpactX Inc. controls. EmpactX makes no representation as to the amount of Bitcoin any machine will produce, the time required to repay a financed balance or recover a down payment, or any recovery of funds; a machine's balance may never be fully repaid. Past production is not indicative of future results. Digital assets are volatile and are not insured by the FDIC, SIPC or any government agency. The governing agreement for each sale controls over anything stated in this release. This release contains forward-looking statements, including statements regarding the potential addition of Zcash miners to the program; such plans are subject to evaluation and may change, and actual results may differ materially.
